Executive Thesis

Risk is elevated but manageable. Today's priority is preparation, not reaction.

Pre-Market Setup

Indicative price

Opening Risk Questions

- Is volume confirming the pre-market move or only reacting to thin liquidity?
- Are filings, PR, or sector headlines likely to change the first-hour narrative?
- Does short pressure increase enough to justify a more active IR response?

Pre-Market Risk Brief

Data Status

FINRA short volume	Available sample
Borrow / cost-to-borrow	Pending API
Options gamma	Pending API
X / Reddit / Stocktwits	Pending API
SEC filings	Monitor

Risk / Signal Dashboard

Low float volatility		High
Short attack risk		Watch
News sensitivity		Watch
Liquidity depth		Moderate

Signal Interpretation

- Risk is elevated but manageable. Today's priority is preparation, not reaction.
- This sample keeps paid or not-yet-integrated feeds clearly labeled as Pending API.
- The goal is not more data; the goal is faster management judgment with clear confidence labels.

Design Principle

These reports should share one executive-grade visual system, but the content should remain different by time slot. The old executive report style fits best as the post-market strategic version, not as a replacement for all three reports.

Pre-Market Risk Brief

Recommended Management Actions Before Open

- Keep IR, finance, and legal aligned on one concise message set.
- Do not issue reactive communication unless misinformation appears.
- Watch first-hour volume quality versus VWAP and short-volume indicators.

Next Review Checklist

- | | |
|--|---|
| ☐ Price vs VWAP | ☐ Volume quality |
| ☐ Short-volume pressure | ☐ Options / gamma change |
| ☐ Filing or PR trigger | ☐ Social narrative heat |

Bottom Line

Risk is elevated but manageable. Today's priority is preparation, not reaction.
